

Proposed Grant Application Instruction Updates 2023 Grant Cycle

All

- Reformatted all application instructions using the same template as the Surface Water Grants.
- Minor corrections
- Added ability to submit grant applications through a file transport system (FTP site)

Small-Scale Ag TRM:

- Removed option of BMP (heavy use area protection) – removed from ATCP 50 and NR 154
- Added filter question
 - This project site is not specifically listed in an approved Adaptive Management Plan under s. NR 217.18, Wis. Adm. Code, or a water quality trading plan pursuant to s. 283.84, Wis. Stats., AND the resulting reductions will not be credited towards the achievement of any WPDES requirement or performance goal.
- Added fields to the budget table to separate state share request of different types of practices (e.g. force account, engineering and design, construction). This will help with developing the grant award and the need to ask for that information later.
- Added details to the Filters for Livestock Facilities
 - Added a cap of 2 additional months of manure storage (8 months total) for cost-sharing, with justification
 - Modified the section on pro-rating project costs due to nonsignificant expansion. Only the following BMPs need to be prorated:
 - Barnyard runoff control
 - Feed storage runoff control
 - Manure storage systems
 - Milking center waste control
 - Other process wastewater
 - Prescribed grazing
 - Relocation of animal feed storage
 - Roof runoff systems
 - Roofs
 - Wastewater treatment strips
 - Livestock fencing

Small-Scale Urban TMDL TRM:

- Added filter question
 - This project site is not specifically listed in an approved Adaptive Management Plan under s. NR 217.18, Wis. Adm. Code, or a water quality trading plan pursuant to s. 283.84, Wis. Stats., AND the resulting

reductions will not be credited towards the achievement of any WPDES requirement or performance goal.

- Added alternative funding check box option
 - Check this box if the applicant requests that the DNR also submit a copy of this application to the upcoming Sewer Overflow & Stormwater Reuse Municipal Grant (OSG) Program.
- Adjusted the water quality need section and score to match the Small-Scale Ag TRM application. It differed by 5 points and was never updated when the other applications were updated.

Large-Scale TRM:

- Removed option of BMP (heavy use area protection) – removed from ATCP 50 and NR 154
- Added filter question
 - This project site is not specifically listed in an approved Adaptive Management Plan under s. NR 217.18, Wis. Adm. Code, or a water quality trading plan pursuant to s. 283.84, Wis. Stats., AND the resulting reductions will not be credited towards the achievement of any WPDES requirement or performance goal.
